PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience in full-stack development, machine learning, and computer vision. Demonstrated proficiency in building scalable applications using Python, with expertise in LSTM-based predictive models and CNN architectures for real-world problem-solving.

EDUCATION

Bachelor of Technology in Computer Science Engineering

Jul 2023 – Jun 2027

UPES, Dehradun, India

CBSE Higher Secondary Certificate | 81.2%

Mar 2021 – May 2022

Birla Shishu Vihar, Pilani

CBSE Secondary School Certificate | 88.4%

Mar 2019 – Jun 2020

Birla Shishu Vihar, Pilani

TECHNICAL SKILLS

Programming Languages: Python

Database: MySQL

Machine Learning Frameworks: TensorFlow, PyTorch, Keras, NumPy, Pandas

Tools & Technologies: Git, OpenCV, MediaPipe

Soft Skills: Communication, Leadership, Teamwork, Problem-Solving

INTERNSHIP

Software Development Intern

Jun 2025 – Jul 2025

Rams Creative Technologies Pvt. Ltd., Jaipur | 8 weeks

Stock Price Prediction using LSTM – Python, TensorFlow, Keras, LSTM, Pandas, NumPy, Matplotlib

- Developed a deep learning model using LSTM neural networks to predict stock prices based on 1-day interval historical data.
- Achieved 85% prediction accuracy through data preprocessing, feature engineering, and hyperparameter tuning.
- Visualized prediction results and model performance metrics using Matplotlib, enabling data-driven investment insights.

PROJECTS

AI-Based Driver Drowsiness Detection System

Technologies: Python, OpenCV, MediaPipe, Computer Vision, Real-Time Processing

- Built a real-time driver drowsiness detection system using OpenCV and MediaPipe for facial landmark analysis to monitor driver alertness.
- Implemented Eye Aspect Ratio (EAR) calculation via MediaPipe's 468-point facial mesh to accurately detect eye closure and drowsiness onset.
- Integrated a visual alert mechanism that triggers warnings in real-time when prolonged eye closure is detected, improving road safety.

Pothole Detection System using Computer Vision

Technologies: Python, OpenCV, TensorFlow, CNN, Image Processing

- Built an intelligent computer vision system utilizing Convolutional Neural Networks (CNN) for automated pothole detection from images.
- Trained model on 2,000+ labeled road images, achieving 92% confidence in pothole identification with minimal false positives.
